

King George Busway Station

Protecta Panels™

The King George Station is an integral part of Brisbane's expanding busway network. The station extends north from the existing Queen Street terminal to form a continuous bus-only roadway under the heart of the city. Due to the high level of pedestrian traffic entering and exiting the station it was imperative for the Brisbane City Council to provide an effective pedestrian barrier, while still encouraging commuters to use the newly-built station.

Project: King George Busway Station

Location: Brisbane, Queensland

Client: Brisbane City Council

Products: Protecta Panels™

Completion: March 2009

Danley® was able to provide a capable and cost-effective solution with the Protecta Panels™ system. Protecta Panels™ provided an effective, attractive and unobtrusive pedestrian barrier for commuters and passers-by, while allowing enough room for Council staff to remove and replace damaged pavers.

Protecta Panels' polyethylene-covered wire mesh panels offered a safe barrier to pedestrians as the system prevented injury from protruding sharp objects, paver particles and other trip hazards. The flat base plates minimised the gap between the ground and the barrier protecting pedestrians' feet while allowing Council workers to repair directly adjacent pavers and maximising the room they had to complete repair work.

As the work area spanned a 120 m section of footpath Council also required a barrier that could be quickly assembled and pulled down.

Protecta Panels™ can be easily moved and re-configured making the system an ideal choice when moving along a large work area in sections.

Protecta Panels™ are also suitable to use as hazard warnings, parking control, erosion control and as temporary gates.

Danley® knows that councils are looking for more than just products. There is a need for safety product experts who understand your specialist requirements and can help decide which safety solutions will work best on your project. Our Safe Guard™ system is focused on exactly that. If you would like more information on Protecta Panels™ or the Danley® Safe Guard™ range please call us directly on: 1800 280 573 (Freecall within Australia).
